# ◤◥ KAILO MEDICAL

KailoQuestionnaire

Trusted by Medical Professionals

A highly secure, touchless way to collect patient information. Send them to your clients and receive them back before the appointment or provide them a device when they arrive at your facility.

Provide your client with a digital experience

- No more clipboards, pens or paper forms
- Information gets entered once saving time and money
- Forms pre-populated and integrated with Sonoreview
- Your branding on the form
- Mobile friendly
- Website integration

Touchless and remote registration

- Seamless and touchless remote check-in for patients
- Self registration online
- Revisit forms and update information without re-entering
- Flexible electronic capture forms for patients
- Ability to capture patient signature with touch
- SMS or email link to patient for completion
- Device agnostic (support for iPad, Android, PC)
- Complete patient information allows you time to prepare

Patients can complete questionnaires before their appointment at home or from their mobile device.

Use KailoQuestionnaire's intuitive forms designer to create context sensitive patient questionnaires, consent forms and even online protocoling workflows with ease.

This device agnostic tool can run on any phone, tablet or computer to facilitate high adoption rates from both patients and staff.

Help patients to complete their forms by automatically pre-populating any prior data into the questionnaire for them.

Implement workflow rules to allow multiple users (reception, patients, technologists and physicians) to interact with the forms in a defined manner.

Include any of the data gathered by KQ into SonoReview worksheets and/or radiologist reports.
